

ABSTRACT

A system for strategy management within an organization. The system includes a shared strategic plan, and a first processing device controllable by a user having a user
5 identification. The first processing device includes a first communications module operable to communicate the user identification, to communicate a request to receive at least a portion of the shared strategic plan, and to receive the requested portion after communicating the user identification and the request. The system further includes a second processing device. The second processing device includes an administration
10 module operable to validate that the user has permission to receive the requested portion, and a communications module. The communications module is operable to receive the user identification from the first processing device, and to communicate the requested portion to the first processing device when the user identification is valid.
